

Identify and exploit your energy savings potential with Industrial Energy Management Services

Please follow this link 

Industrial Energy Management Services

Industrial Energy Management Services help you to identify savings potential for all types of energy consumption, including electricity, water & gas. Based on your company's use cases, our service experts identify relevant KPIs, design a measuring concept & install an energy mgmt. system that creates genuine added value about the transparency of the energy consumption of machines, lines, and plants. This forms the basis for analyses that our experts perform to identify savings potential & provide recommendations for energy-saving measures.

How does it work?

Module 1 – Consulting

- Definition of Energy Performance Indicators
- Creation of a measuring concept
- Evaluation of data collection and connectivity requirements

Module 2 – Implementation

- Installation of the necessary hardware and software
- Data modeling and preprocessing of input data
- Creation of dashboards and reports

Module 3 – Optimization

- Energy efficiency analysis
- Customized recommendations to optimize energy efficiency
- Maintenance of the energy management system

Main value drivers

Increased transparency for complying with local regulations and the ISO 50001 Standard

Energy savings based on data analytics

Improved sustainability thanks to reduced energy consumption
