

Optimization of drive applications covered by savings with Energy Performance Contracting

Please follow this link 

Energy Performance Contracting

Energy Performance Contracting for drive applications pays for optimization measures through savings in energy costs. The projects are implemented according to a four-step process with low risk for our customers thanks to the promised savings.

How does it work?

Analysis

Collection of data and evaluation of the savings potential

Concept

Design of the measures and definition of the baseline

Implementation

Execution of the measures and verification of savings

Service

Inspection, maintenance, repair and ensuring of savings

End of the contract period

Calculation of saving potential

Binding offer with specific savings

Main value drivers

Improving the energy efficiency of their plants

Lowering energy costs and avoiding high investments
