THE PILLARS OF SUSTAINABLE DRIVETRAINS

Accelerating Drive Applications towards a Sustainable Future

Energy Efficiency

- ✓ Innovate energy-efficient products leveraging simulations and PLM
- ✓ Design and plan efficient manufacturing with simulation of machines, lines and plants
- ✓ Optimize drive systems with a holistic digitalization and automation strategy
- ✓ Track and manage energy consumption enterprise-wide
- ✓ Optimize energy productivity across plants with linked energy and production data
- ✓ Save energy with predictive maintenance and through retrofit/modernization
- ✓ Balance supply and demand with a flexible energy mix
